

New MetalMec 10M Series

MEC Switches is proud to announce a new addition to the accessory program of MEC switches with the new Metalmec. The new cap has a stainless-steel front offering an aesthetic look and provides excellent halo illumination. The cap is to be used with a Multimec 5G switch, where the build in LED will provide the needed illumination for the cap.

The 10M16 cap can also be part of a modular solution called Metalmec, where the cap in combination with a Ø22mm stainless-steel Bezel (PN 2M), will offer a visual design like a panel mounted antivandal Switch. Multimec switches are known for their robustness, so it is a reliable PCB solution we are launching, with nice design and great haptic. Intended for applications with multiple switches to lower the total installation cost.
