

14mm Dual Icon Series LED Indicators

The Dual Icon series is a led indicator that presents two distinct visual signals within a single unit. When you need to show different operating states, this panel mount LED indicator switches between distinct colours or symbols using dichroic technology.

Thanks to a high level of sealing -IP67- it is protected from water and dust, making it reliable in harsh industrial environments or outdoor installations. Whether you're powering it with 2V, 12V, or 24V DC, the display remains clear and visible - even in bright sunlight or dim conditions. This makes it particularly valuable for equipment status monitoring and process control panels where operators need immediate visual confirmation of changing conditions.

General Specifications:

- Max Reverse Voltage – 5V
- Life Expectancy: 100,000 hours
- Torque: 75 cNm
- Maximum panel thickness 11 mm
- IP67 Sealing (EN60529)
- Insulation resistance : 4,000 MΩ at 500 VDC
